INFO 343 Final Project

November 18, 2017

1:00PM - 3:00PM

No problems we just met to discuss what we wanted to make and the technologies we wanted to use. We also made a wireframe of what we wanted and divided up the user stories.

November 20, 2017

5:00PM - 9:00 PM

Finished user story and work on the technical description along with reviewing and collaborating on other sections.

November 25, 2017

10:00AM – 11:30AM

Discussed how to move forward in the project and some implementation details.

1:00PM – 3:00PM

Set up Firebase auth and the repo.

November 28, 2017

11:00PM – 12:30AM

Worked on how the task list would be displayed.

Problems:

- Unsure as to how everyone else wanted the react app to be set up

November 29, 2017

10:30AM - 12:30PM

Scraped my list and went with another project members. Then worked on skeleton for a Modal for the Task and Meeting.

2:55PM - 12:30PM

Continued working on the Modals

Problems:

- Auth() wasn't working for me which was fixed by adding myself into firebase directly

- The Modal wasn't loading data correctly, fixed by changing lifecycle of app

December 1, 2017

1:00PM - 2:30PM

Finalized Modal and its connection to firebase.

Problems:

- Firebase consistently thinking I'm a threat though I own the DB.
- Trouble getting group members from the DB due to how we had set up the hierarchy. Fixed with a series of key and map functions.

December 7, 2017

7:00PM - 11:00PM

Had another meeting and decided to adjust some functionality. There were also some issues in some of our code and we worked together to hash out some of them like the calendar and note. Additionally, we decided to change some UI on the Modals and add Markdown to the notes.

December 9, 2017

4:00PM – 7:00PM

Added invite to meeting button and logic.

Problems:

- More trouble with getting members from DB but this time we have changed it to users and it has to be added to two places in the DB which was fixed by just adding another push() function call and adjusting how some of the DB for members was laid out this time.

December 11, 2017

12:30PM – 2:30PM

Tried to fix button, eventually Matthew fixed it for me

Problems: A lot, not solution

5:50PM – 6:00PM

Helped deploy app to github

Problems:

- Github pages doesn't recognize a nested folder as a react app.
